• Learning to Localize Crashes at Scale

Feb'21 – present

Advisors: [Chetan Bansal](#), [Dr. Suman Nath](#), Microsoft Research

- > Designed and developed **DeepAnalyze** - a deep learning based solution to localize crashing faults from crash stacks.
- > Empirically analyzed the complexity and heterogeneity of large-scale crashes.
- > Conceptualized a **novel sequence labeling formulation** utilizing both semantic and context stack information.
- > Showed the effectiveness of **transfer learning** to build models for **cross-application** scenarios with minimal data.
- > Working on deploying an online-learning pipeline for continuously improving DeepAnalyze in the wild.
- > Working on creating a library of tools for related tasks like faulty thread localization, problem bucketization, etc.
- > This work is *Under Review*.

• Knowledge Fabric for Incident Management

Advisors: [Chetan Bansal](#), [Dr. Nachiappan Nagappan](#), and [Dr. Thomas Zimmermann](#), Microsoft Research

▶ Neural Knowledge Extraction from Cloud Service Incidents

Jan'20 – Nov'20

- > Designed & built **SoftNER** – a framework for weak-supervised knowledge extraction from incident reports.
- > Framed the problem as a domain agnostic and extensible **named-entity recognition** task.
- > Proposed a **type-aware Multi-task neural architecture** for knowledge extraction.
- > **SoftNER** is now integrated into Microsoft's ICM system and has enriched over 9K+ incidents.
- > This work was accepted at **ICSE 2021** and featured on **VentureBeat**.

▶ Mining Knowledge Graphs From Cloud Incidents

Dec'20 – Feb'21

- > Extended **SoftNER** by mining **binary entity relations** and scoring them using **normalized PMI**.
- > Used entities and relations to construct an incident **knowledge-graph**.
- > Used a combination of clustering and a **novel path based score** to identify entity-incident relevance.
- > This work is *Under Review*

• A Machine Learning Understanding of Sepsis

Jan'20 – Jun'20

Advisors: [Dr. Gowri Srinivasa](#), PES University

- > Proposed an approach to predict two outcomes in sepsis patients - **Sepsis Severity** and **Comorbidity Severity**.
- > Used **local interpretable model-agnostic explanations** and other methods to analyze models.
- > Harmonized consistencies/contradictions about Sepsis, between expert human knowledge and that of a model.
- > This work was accepted at **IEEE EMBC 2021**.
